

EACO Regional Workshop on Sustainable E-waste Management in the East African Region Park in Hotel-Kigali Rwanda, 14th – 16th May 2018

Possible mechanisms for harmonizing regional strategies and efforts in sustainable management of e-waste

By

**Dr. Faridah Hussein Were
University of Nairobi, Kenya**

Background information

Advancement in ICT sector is playing a critical role in improving productivity and efficiency in service delivery

Connect 2020 agenda complements infrastructure in achieving SDGs 2030

Smart Africa Manifesto transforms the region into digital world

- ICT mainstreamed in the public operations
- Computer for schools

Increased population is exposed to hazardous materials through inappropriate management practices associated with handling, storage, recycling and disposal of e-waste

Contamination of environment and human health through disposal
(Dadora Dumpsite Kenya)

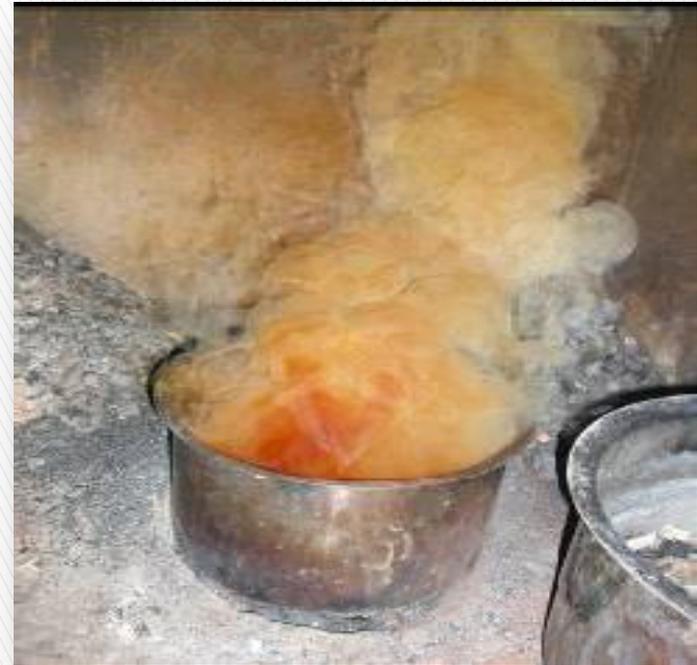

Contamination through storage
(Stockpiles)

E-waste contains valuable and potentially hazardous materials

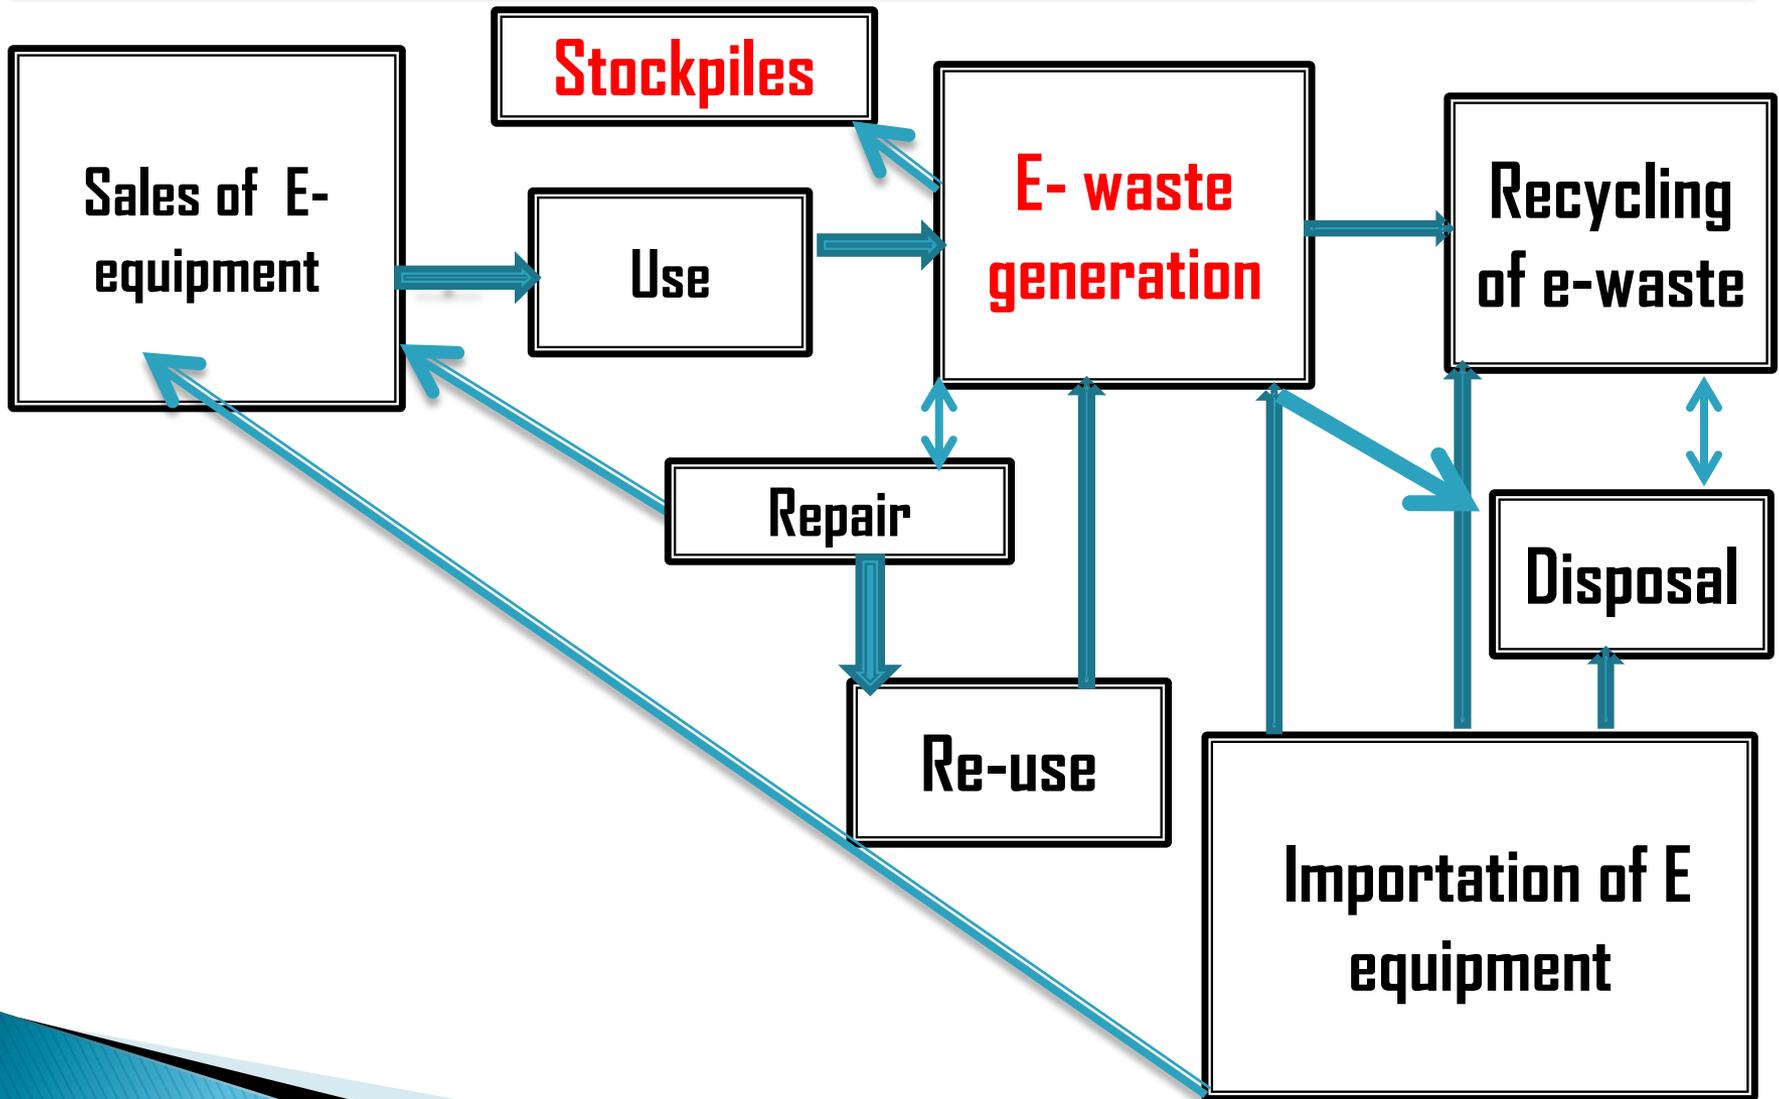

Contamination of environment
through open burning
(poor methods of recycling)

Contamination of environment
through poor methods of
recovery

Life cycle of E-waste along value chain is very complex

Draft regulation on sound management of e-waste (2013) in Kenya

Provides a detail framework for:

Identification

Collection

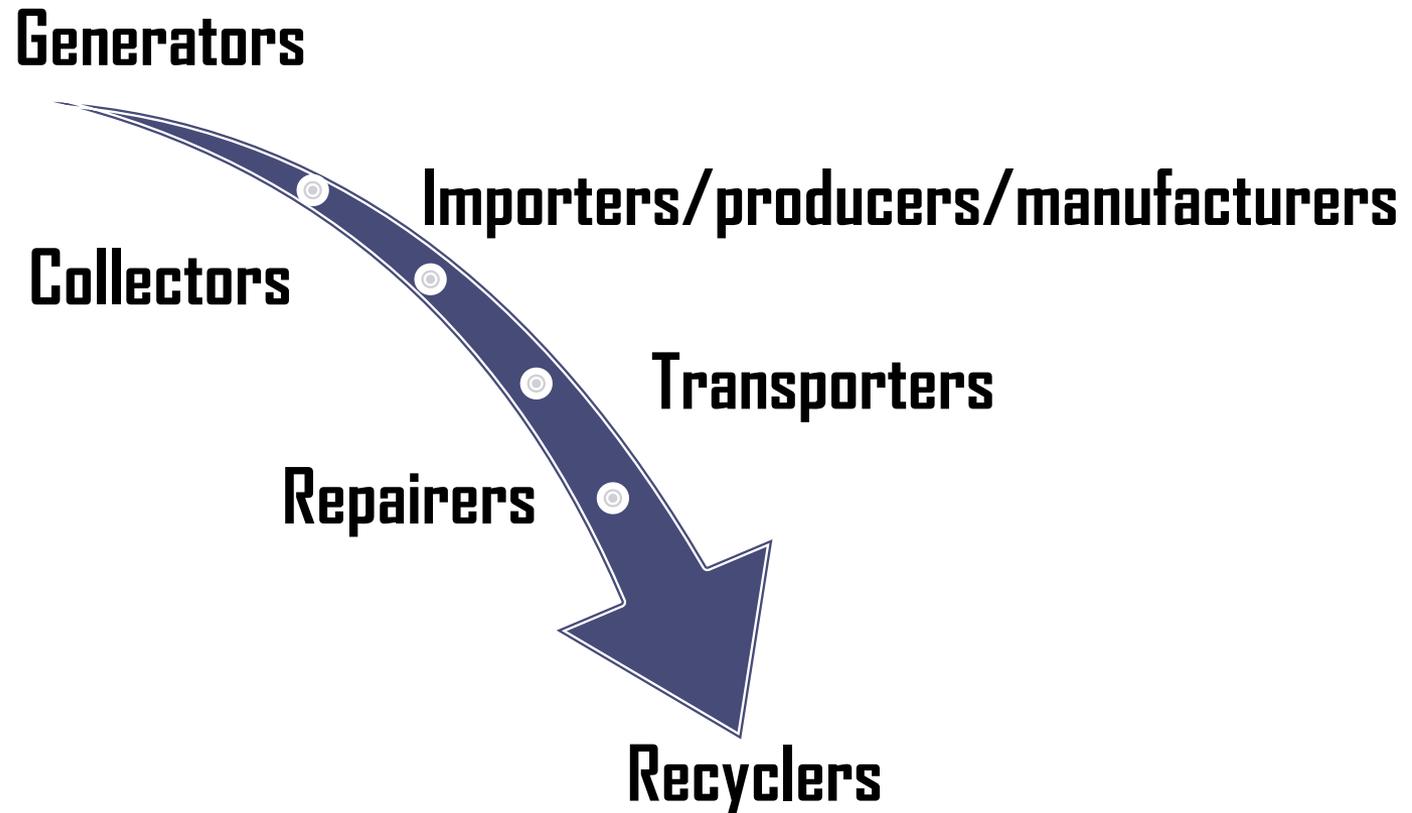

**Sorting/
segregation
& temporal
storage**

Transportation

Recycling

Disposal

Responsibilities of e-waste management along the supply chain

Some of associated challenges of sound environmental management of e-waste across the region

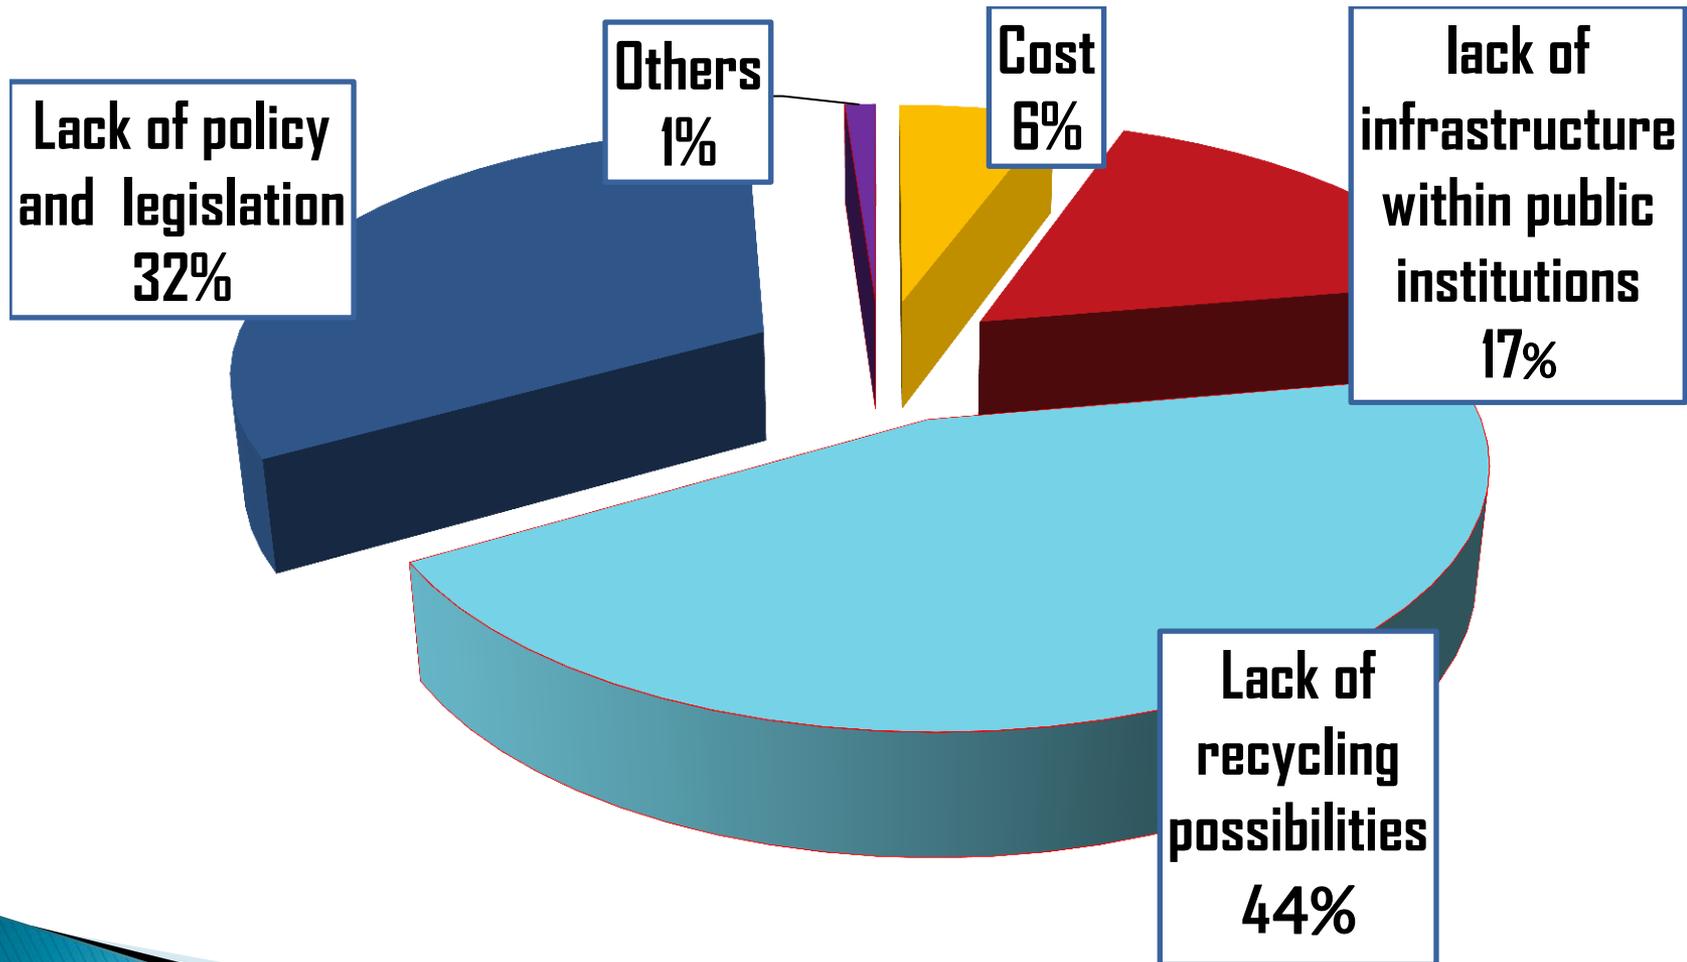

Limited implementation of sound management of e-waste under guidance of Basel, Rotterdam, Stockholm and Bamako Conventions due to inadequate resources

Inadequate enforcement of extended producer responsibility programme based on the complexity of supply chain of e-waste

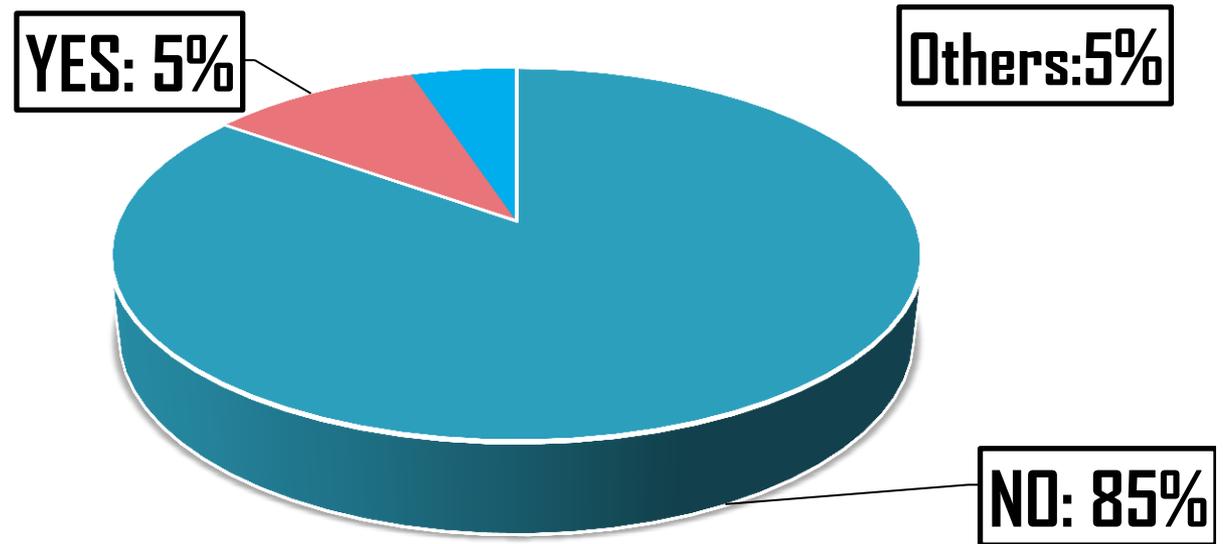

Limited accessibilities to services and application of best available technologies and practices in remote areas

E-waste is potentially hazardous and have some economical value hence transboundary issues and attraction to informal sector that lacks resources

A survey in Kenyan public institutions on challenges facing sound management of e-waste (2014)

The willingness of public institution to pay for e-waste management was at 5% if proper disposal is guaranteed

Take-back or implementation of Extended Producer Responsibility may be an appropriate solution to this

Limited national e-waste policies and legislation to set standards, guidelines and related responsibilities

Lack of capacities and poor record keeping on stocks and imported products

Lack of reliable information on relevant stakeholders involved e-waste

Limited recovery of valuable materials from e-waste

Inconsistent data on stocks and e-waste generation from the stakeholders

Lack of disposal options for hazardous components of e-wastes

Limited public awareness on e-waste and its potential risks to the environment and human health

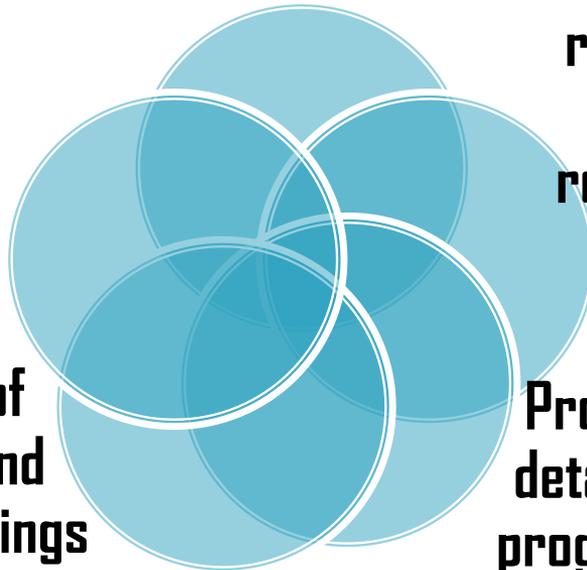

Limited of infrastructure for collection and recycling of e-waste

Significance of harmonization of efforts and strategies

Provides comprehensive overview of global e-waste data, trends and related challenges

Enhances information sharing to link the challenges to potential solutions

Reduces duplication of efforts in the region and enhances trade in a settings that have limited resources

An indication of recycling potential to recover secondary resources and setting of environmental targets

Provides policymakers with detailed information to track progress and identification of challenges in the region to achieve SDGs

Possible mechanisms for harmonization of efforts and strategies

Regional capacity-building workshops to enhance cooperation in establishment and formalization of e-waste recycling facilities

Collaboration with key stakeholders: the driving force of policy and regulations, CSR programmes, take back programmes, large global ICT manufacturers, agenda 2020, Smart Africa Manifesto, EACO, UNIDO, UNEP

Capacity building and training in setting standards to promote best available practices and technologies in management of e-waste, and recycling opportunities in the region

Establishing social-economic aspects in increasing collection of e-waste and strengthening regional capacities to monitor and control transboundary movements of e-waste

Establishing elaborate financial mechanism and resource mobilization through BRS/B, UNEP, Connect 2020 agenda and SDG 2030, Smart Africa Manifesto and EACO

Supporting collaborative e-waste projects, programmes and efforts as well as disseminating findings across the region

Development of e-waste implementation plan, setting standards, targets and commitments

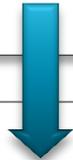

Participating in international arena in e-waste related exchange programmes

Addressing challenges across the region and converting e-waste into a resource

Supporting comprehensive public awareness programmes and establishing repository for information sharing

Some collaborative efforts

UNEP focused on volumes of personal computers, mobile phones, TVs generated in Tanzania and Kenya

National Universities and Research Institutions have carried out some baseline research to quantify e-waste

Series of National awareness programmes and collection of e-waste have been documented mainly in urban areas with involvement of key stakeholders

EACO (2016) established National and Regional Steering Committees to have Implementation Plan and Establish Regional Strategies on Sound Management of Related E-waste

Donation of collection container for laptops, mobile phones, USBs, CDs, DVDs by Safaricom in Kenya

**Maximum
Collection of
E-waste**

**Integrated with the
Existing
Environmental
Sound
Management E-
waste Capacities:**

**Adopt
Appropriate
Take Back
Scheme**

**Warranty/Offering
Free after Sell
Services, Repairs
and Technical
Advise**

**Increasing Retail
Outlets for Electronic
Equipment that Serve
as Collection Centres**

**Partnership with EE
Importers/Suppliers/
Distributors, and E-
waste Sellers**

**Diverse Mass Media
for Wider Coverage**

**Capacity
Building and
Funding**

**Collaborations with Regulators,
Researchers, Academia, Policy
Makers, Suppliers, Collectors,
Consumers, UNEP, NGOs among
other Key Stakeholders**

What is needed

- ▶ **Generation of comprehensive reliable and comparable data on volumes of e-waste to expand the scope across the region**
- ▶ **Close co-ordination, commitment and involvement of key stakeholders along life cycle of e-waste management**
- ▶ **Enforcement of existing legislation, while developing comprehensive regional regulatory framework for e-waste recycling**
- ▶ **Building existing capacities at all levels of participation while taking into consideration the specific legislation, technical, economic, financial, environmental, social and cultural factors**
- ▶ **Establish suitable strategies that will adopt take back schemes alongside massive awareness**

Conclusion

- ▶ **Comprehensive regional regulatory framework for e-waste recycling and extended producer responsibility targeting maximum collection at all levels**
- ▶ **Designing suitable strategies in tracking life cycle of e-waste in collaboration with relevant stakeholders for the development of environmentally sound management of e-waste**
- ▶ **Capacity building in the application of Global E-waste Monitor 2017 tool kit to establish trends in e-waste management in the region**

Acknowledgement

- ▶ **I acknowledge support from EACO**
- ▶ **EACO in collaboration with RURA for organizing the workshop**
- ▶ **The University of Nairobi and Park Inn Hotel, Kigali, Rwanda**

Thank You
